Morpho Polyphemus ~ Central America

The annual exhibit also may include these additional species, depending upon availability from the supplier. Butterfly species are from Africa, Asia, North, Central and South America.

Butterflies serve a critical role as pollinators, provide food for birds and wildlife and give mankind early warning signs of pollution and other symptoms of habitat degeneration. The preservation of butterflies and their habitat results in the preservation of habitat and life itself for flora and fauna in countless areas of the world.
